

MAXIMUS

.416 Barrett or .50 BMG

The Halo Arms, **MAXIMUS** rifle is the ultimate hybrid which provides a rugged, versatile platform for all shooters.

The hybrid design captures the accuracy and reliability of a bench rest competition bolt action rifle and combines it with a fully adjustable aluminum super frame.

The skeletonized aluminum stock is the ultimate in stiffness and will not flex as seen with most synthetic stocks. Rock solid dimensional stability in heat, cold, water and ice will not disturb your zero!

The competition action and target grade barrel are precision fit in the 100% machined stock. The free float barrel is allowed to resonate naturally within the open forearm. A bipod may be positioned at any point on the forearm to comfortably fit the shooter and maximize front end stability.

The forearm is 3" wide and flat on both the bottom and sides. This shape contributes to accuracy for bench rest shooting yet is very comfortable for tactical applications. Picatinny rails attach on the bottom and sides of the forearm to accommodate bipods, lights, lasers, vertical grips or any other Picatinny rail accessory you can imagine.

The pistol grip, adjustable recoil pad height, adjustable length of pull and adjustable cheek rest allow a perfect fit for any size shooter. The Jewell Trigger is adjustable, preset for 2 lb brake and uses a bottom safety which is easily actuated with the trigger finger.

The **MAXIMUS** is a bench rest rifle, in a tactical package.
